Tiana (Barcelona)	21,860	Zahínos (Badajoz)	8,531
Teià (Barcelona)	21,721	Puerto Serrano (Cádiz)	8,570
Tres Cantos (Madrid)	21,585	Vícar (Almería)	8,572

By ordering the average income per person of Spain's municipalities from lowest to highest, we obtain the quartiles of the distribution, which divide the municipalities into four groups with the same number of municipalities.

By geographical location, the Basque Country -where 88.4% of its municipalities were among the 25% with the highest income in Spain (above 15,073 euros)- and the Autonomous Community of Navarre -with 75.0%- stood out.

At the other extreme, the Region of Murcia -where 84.4% of its municipalities were among the 25% with the lowest income (less than 11,537 euros)- and Extremadura -with 82.5%- stood out.

Distribution of municipalities by autonomous community and range of average annual net income per inhabitant. Year 2022

Revision and updating of data

The 2022 data is final. All results of this operation are available on [INEbase](#).

Methodological note

The **Household Income Distribution Atlas (ADRH)** is a statistical operation that provides income level and distribution indicators per person and household, completing this information with demographic indicators.

For the preparation of the income indicators, the INE uses tax data from the Tax Agency and the Provincial Treasury, ascribing the income to the place where the income recipient resides.

Type of operation: operation based entirely on the exploitation of administrative records. Aggregate results (different indicators such as mean values or distribution measures) are offered in table form.

Geographic scope: the national territory as a whole, offering data by census sections, districts, municipalities, islands, provinces and autonomous communities.
